HERBERT BRODERICK

Founder of Buildway

"I came into the steel building industry more than a decade ago. I was full of new ideas for technological improvements, dreams and aspirations of modernizing the way the steel building industry has been operating, as it hasn't changed for the last 15 years. After multiple attempts to encourage top-level management to modernize the outdated delivery and engineering processes, and to implement new ways of serving customers through my IT background, the idea of starting my own company was born. I promised myself when I started Buildway, that I would always have an open door policy, so that when an employee contributes an idea, they will always be heard. Fast forward 4 years and we are a leader in the industry, utilizing the latest in technological advances for customer acquisition, product management, delivery scheduling, engineering and process support. Our customers always have confidence knowing that when they place an order with us they will receive their certified engineered drawings after 5 days of their purchase. Because we are a digital company, orders are streamlined electronically, from document delivery to blueprint and foundation drawings, we always make the process easy and painless. From your initial design plans right up until, and after your build is completed. And thanks to our highly-dedicated team showing uncompromising integrity on each sale, the Buildway Family is growing stronger day by day."

OUR COMPANY

WE ARE PROUDLY AMERICAN OWNED AND OPERATED. We lead with honesty and respect, treating every customer like a neighbor and friend. Our greatest asset? Our people. OUR CORE VALUES PUT CUSTOMERS, EMPLOYEES, AND COMMUNITIES FIRST. We carefully consider the impact each building has on the environment, the community, and—most importantly—how it will make our customers feel. Every building we produce is custom-made—with your needs, values, and vision in mind. We tailor each structure to reflect the unique interests and requirements of every customer. From hobbyists and homeowners to architects, engineers, and local entrepreneurs, our customers come from all walks of life. That's why our team is trained to listen first— so we can turn your dream into reality, every single time. Because with us, your building is only limited by your imagination.

Our philosophy has always remained the same since day one- To provide not only the highest-quality, most durable buildings on the market, but also to deliver unparalleled customer service—every solution, every time. We are committed to building communities one structure at a time.

OUR COMPANY

For over 40 years, our factory has served American Homeowners and Businesses with the highest quality Pre-Engineered steel buildings trusted nationwide for strength, performance, and versatility.

We leverage over 150 manufacturers through the NCI network of registered and certified partners for our pre-engineered buildings and are able to ship our building kits out of almost every state in America. This drastically cuts down on shipping time, as we always select a factory that is closest to your location. Our services include the in-house design, engineering, manufacturing, and delivery of complete building kits, direct from the factory to you. We use the latest technology to present a wide range of building options, helping you clearly see why your quote matches exactly what you need.

Buildway Buildings' kits come in virtually any size. Creating custom shapes and sizes is easy. Our carefully engineered designs will help you achieve your desired results quickly, efficiently, and with minimum labor. All our buildings are clear span; allowing for a quick and painless expansion if needed.

OUR COMPANY

Our premium quality, pre-engineered steel building kits have been in use for a wide range of agricultural, industrial, commercial, residential, and recreational applications. Every Buildway building solution is engineered and manufactured in the United States by a team of dedicated building specialists and certified engineers.

Our factory is more than just a processor of steel. We have a state-of-the-art manufacturing facility that uses only the most advanced engineering techniques and technologies, resulting in technological innovations and unbeatable engineering methods.

Coated with super-tough Galvalume Plus™ Technology, a dry, clear coating that gives your building a maintenance-free finish.

OUR COMPANY

We are the only manufacturer in our industry to offer both “opposite” and “crimp” designs, double-bolt panel lap connections, and flat and fully-crimped end-to-end paneling. This also includes 18 and 24-inch roof and sidewall panels. In other words, the options are practically limitless! Our buildings are manufactured using the highest quality Galvalume Plus™ steel. They are engineered to meet all applicable standards set by:

The American Institute of Steel Construction (AISC)

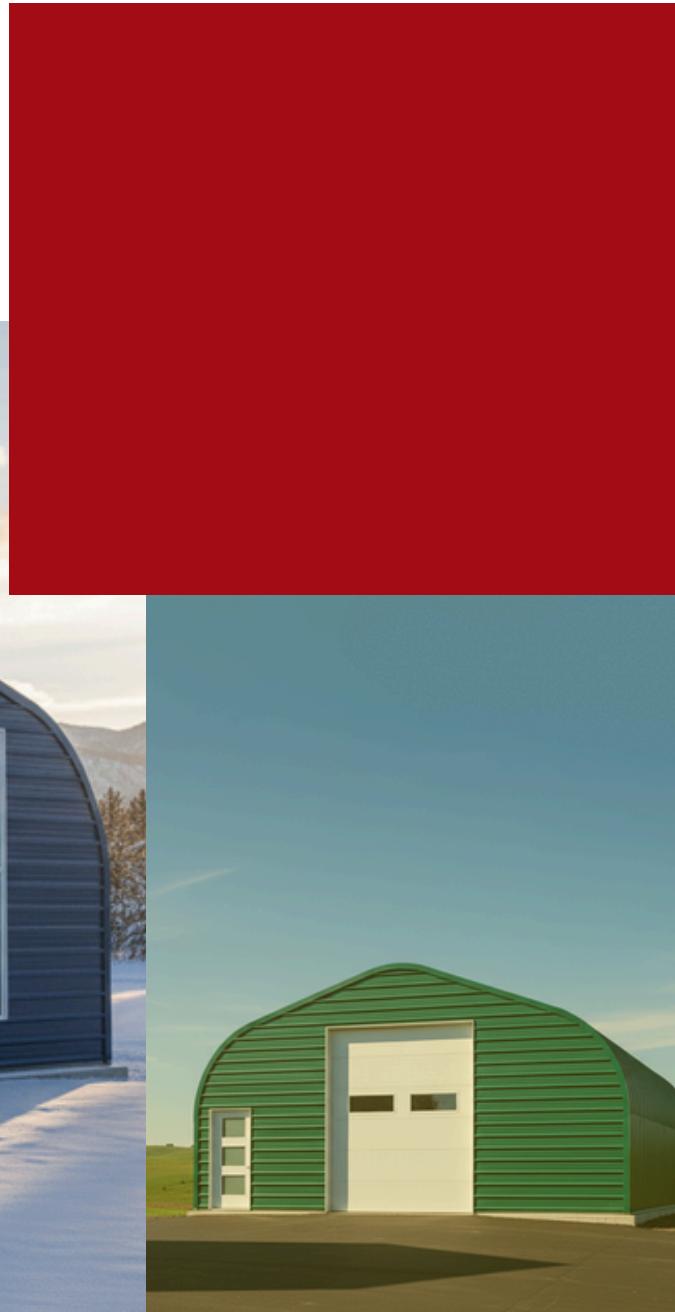

The American Iron and Steel Institute (AISI) all structures are designed in full compliance with **The International Building Code (IBC)** for steel building systems in the united states.

Proudly built in America
manufactured at our u.s. based
facilities from pittsburgh to
texas, tennessee, and beyond.

BUILDING MODELS

Econospan

Peaked roof with straight-sided walls, varying center heights, and virtually unlimited lengths. Widths ranging from 16' – 40'.

Buildway's Econospan Quonset building model is engineered with a straight roof, straight sided, clear-span design. Econospan buildings have a uniform roof slope of 18 degrees (approximately 4:12 roof pitch), this allows us to offer the largest variety of width options, when compared to any company in the industry. This Quonset Hut is suited for a broad range of applications ranging from, storage, on-site offices, retail outlets, free-standing garages, workshops, mechanic shop, applications and much more.

BUILDINGS MODELS

S-Series

S-Series buildings feature a straight-walled, multiple-radius, clear-span arch design.

Our standard buildings range in width from 20 to 60 feet with varying center heights and virtually unlimited lengths.

The S-Series building is very popular for medium-to-large industrial, agricultural and military applications, equipment storage, commercial offices, retail outlets, manufacturing facilities, garages and workshops. Custom buildings in excess of 60 feet in diameter are also readily available.

BUILDINGS MODELS

Arch - Style

Nicknamed “The Original Quonset”, Arch Style buildings range in widths from 19' to 100' and are available in virtually any length and height.

These buildings feature single-radius, truss-less, clear span construction, with steep sidewall clearances that make this model versatile, economical, and durable. Buildway has taken it a step further, by offering single or double-over-lap construction for even more options. Arch Style buildings are suitable for a complete range of industrial, commercial, agricultural and military applications. They may be used as permanent or portable structures and can be dismantled and relocated if required.

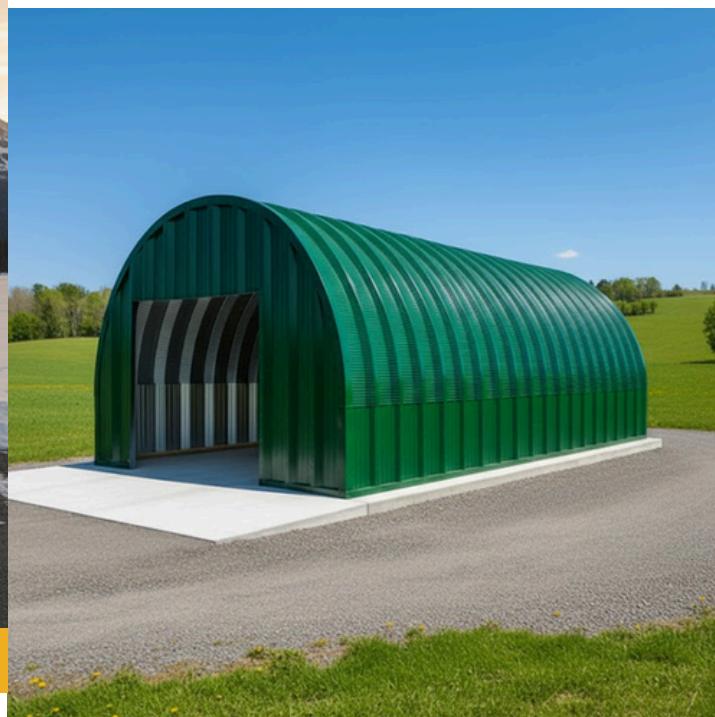

BUILDINGS MODELS

Mini-Series

Our buildings' classic Arch Design has been used for centuries to create strong, long-lasting structures. Because there are no trusses or overhead obstructions, every building has 100% usable space.

Mini steel buildings are 10' to 20' wide and are available in virtually unlimited lengths. The Mini building is constructed with a reduced width and depth than our regular-sized panel, this makes them easier to handle than our competition's panels during construction.

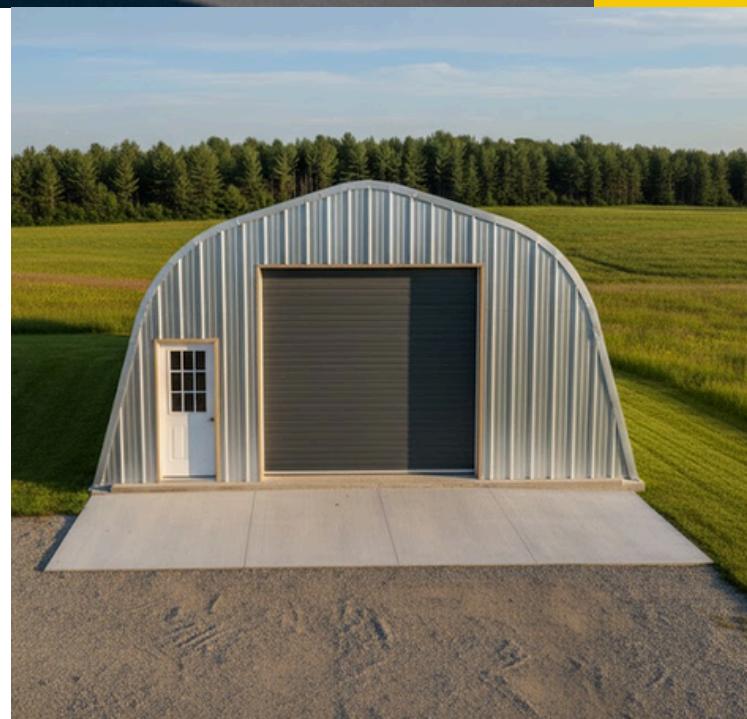

BUILDINGS MODELS

Alpine

Peaked roof with sloping walls. Alpine models are available in many different sizes. Widths ranging from 20' to 50'

Alpine buildings feature a cathedral-style peaked roof with a 4:12 pitch. Popularly known as the “wide-body Econospan”, it is designed as a tough, rugged and durable steel building solution. The Alpine is ideal for commercial offices, retail outlets, storage, workshops, warehousing, ideal for erection in high-snow regions, and much more.
